COMPANY PROFILE

> Who We Are

We're more than a smart lock company — we're redefining what it means to feel secure.

Backed by world-class partners and top-tier hardware suppliers, we've built Ora FacePass to work in homes, apartments, student housing, offices, and enterprise facilities. Our technology is powered by Stereo 3D facial recognition and other cutting-edge biometrics verification technologies, live body detection, and on-device encrypted storage, giving you unmatched security without sacrificing ease.

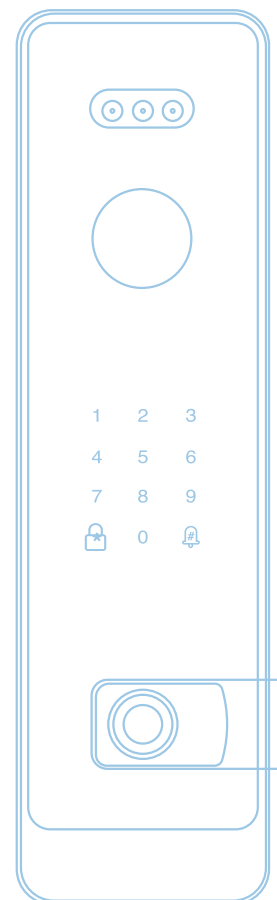

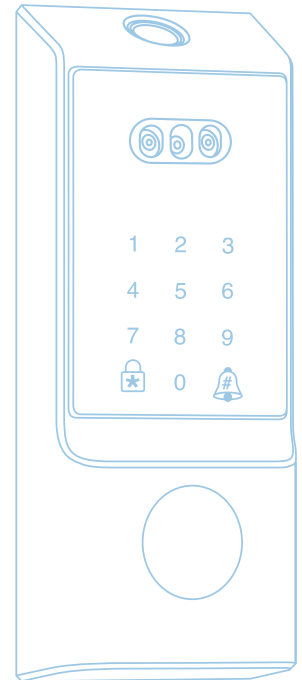

Whether you're carrying groceries, managing hundreds of tenants, or protecting your business, Ora FacePass adapts to your life — delivering access that is fast, safe, and always in your control.

> Our Vision

At Ora FacePass, we believe the way you access your world should feel effortless. Our vision is to integrate facial recognition into both residential and commercial access controls, creating a future where entry is secure, modern, and convenient — no keys, no codes, just you.

> Our Mission

Our mission is simple: to give people and organizations smarter, safer, and simpler ways to control access. With Ora FacePass, we bring together cutting-edge AI, elegant design, and uncompromising security to make the everyday act of unlocking a door feel seamless, natural, and trustworthy.

COMPANY PROFILE

Core Values

01 Security First

Protecting what matters most with financial-grade security and anti-spoofing technology.

03 Customer-Centric Design

Built to solve real-life challenges, from lost keys to shared access to large-scale management.

05 Reliability & Trust

Dependable performance that works when you need it most.

02 Continuous Innovation

Always evolving with regular upgrades, AI-driven improvements, and user-inspired features.

04 Affordability with Value

Premium features, made accessible at market-leading prices.

06 Future-Ready Technology

Designed to scale with tomorrow's needs, integrating seamlessly into homes, businesses, and smart ecosystems.

Our Commitments

To You

We promise products that feel invisible in use but invaluable in protection. Simple to set up, effortless to live with, and powerful when it matters most.

To Our Employees

We invest in our people. By fostering a culture of innovation, growth, and inclusivity, we empower every team member to bring their best ideas forward and shape the future of smart access.

To Our Partners & Distributors

We are committed to building lasting partnerships through transparent collaboration, reliable supply chains, and products engineered for growth. Together, we create opportunities to scale, innovate, and deliver exceptional value to the market.

To Better Solutions

We design with purpose. Every product combines modern AI, elegant hardware, and intuitive software to create access that feels natural and works anywhere.

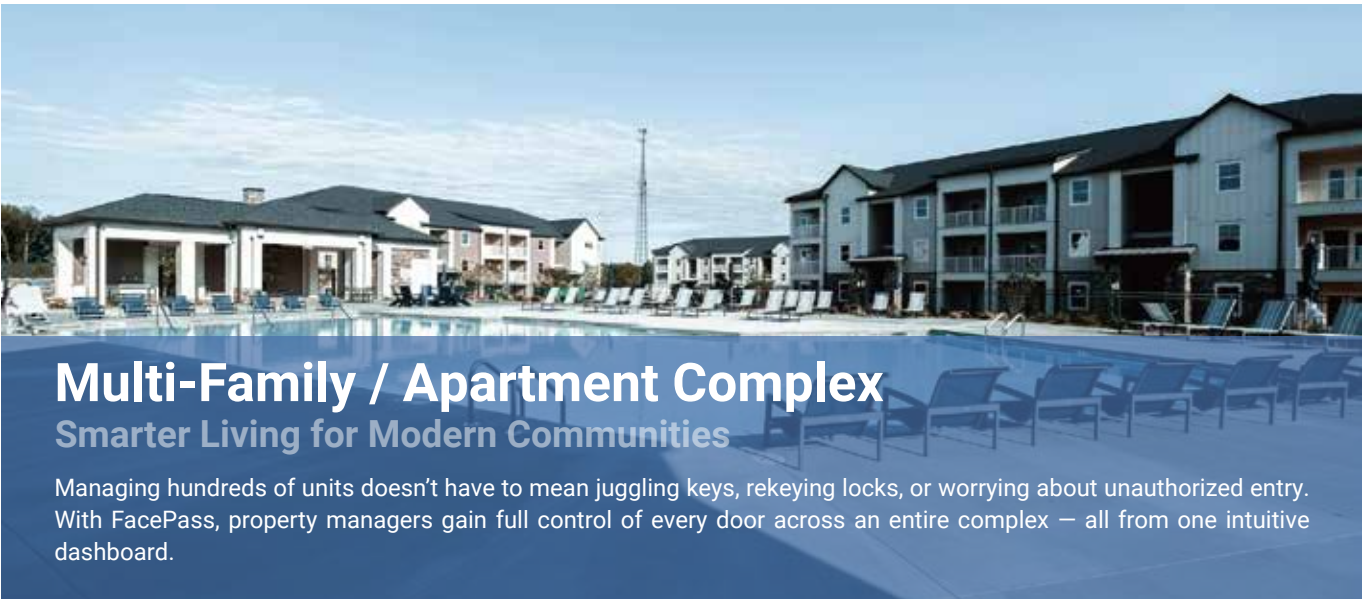

To Continuous Progress

Like the best technology companies, we iterate constantly. Each year brings smarter models, tighter integrations, and new features inspired by our customers' lives and needs.

SOLUTIONS OVERVIEW

At Ora FacePass., we know that access control isn't one-size-fits-all. That's why the FacePass Property Access Management System is designed to adapt — whether it's a high-rise apartment complex, a government housing facility, a student dorm, or a modern office building.

By combining AI-powered facial recognition, secure mobile app integration, and centralized property management tools, we make access smarter, safer, and simpler for everyone.

Seamless Move-In and Move-Out

Managing hundreds of units doesn't have to mean juggling keys, rekeying locks, or worrying about unauthorized entry. With FacePass, property managers gain full control of every door across an entire complex — all from one intuitive dashboard.

Every Entry Tied to an Identity

Unlike traditional keys, FacePass creates identity-bound logs for every unlock attempt. Managers can review activity for security, compliance, or disputes, ensuring trust and transparency.

Resident Freedom, Manager Control

Residents manage their own access, but property managers retain centralized oversight. This dual control ensures convenience for tenants and accountability for management.

Why It Matters

With FacePass, apartment living becomes more secure, more modern, and far easier to manage. Property owners save on operational costs while giving residents the seamless, key-free living experience they expect.

SOLUTIONS OVERVIEW

Student Housing

Secure, Stress-Free Housing for Students and Staff

Student housing presents unique challenges: high turnover, lost keys, and shared access. FacePass was built to solve exactly these problems.

Instant Digital Onboarding

At the start of each semester, administrators issue digital credentials instead of physical keys. Students download the app, pair their lock, and set up access in minutes.

No More Key Chaos

Forget the cost and frustration of reissuing lost keys or replacing locks. Access is digital, managed through facial recognition, fingerprints, or codes.

Flexible Access Control

Housing managers can schedule access start and end dates, ensuring locks reset at the end of each term. No manual lock changes, no uncertainty.

Accountability for Peace of Mind

All entries are tracked and logged by identity, reducing disputes and increasing safety for both students and administrators.

Why It Matters

Students enjoy the freedom of secure, modern access, while administrators benefit from reduced workload, improved safety, and smoother housing transitions.

SOLUTIONS OVERVIEW

Government Housing

Scalable, Secure, and Accountable Access

Government housing requires a unique balance of affordability, oversight, and tenant dignity. FacePass delivers on all fronts.

Centralized Oversight Across Properties

Administrators can manage hundreds of units across multiple sites from one system, ensuring consistent standards and reducing inefficiencies.

Reduced Operational Costs

Remote credential revocation eliminates the need for costly rekeying or lock replacements, keeping budgets under control.

Audit-Ready Access Logs

Every unlock attempt is tied to an individual identity and stored for review. This makes compliance, security audits, and tenant accountability straightforward.

Improved Tenant Experience

Residents gain modern, secure, keyless access, improving quality of life while reducing stigma often associated with government housing facilities.

Why It Matters

Public housing authorities meet their goals of cost savings, oversight, and tenant satisfaction with one elegant solution that scales to thousands of units.

SOLUTIONS OVERVIEW

Office Buildings & Office Suites

Modern Security for the Modern Workplace

From co-working spaces to corporate headquarters, offices demand access solutions that are secure, flexible, and professional. FacePass delivers exactly that.

A Professional First Impression

Facial recognition entry offers a modern, touchless experience that projects security and sophistication to employees, clients, and visitors alike.

Flexible Access for Teams and Tenants

Grant, adjust, or revoke access instantly — whether for a new hire, a contractor, or an entire suite of employees. Permissions can be customized to individual roles or office zones.

Identity-Bound Accountability

Every access event is logged and tied to a specific individual, helping HR, IT, and compliance teams maintain clear audit trails.

Scalable Management

Manage a single suite, multiple tenants, or an entire high-rise from one platform. As your organization grows, FacePass scales with it.

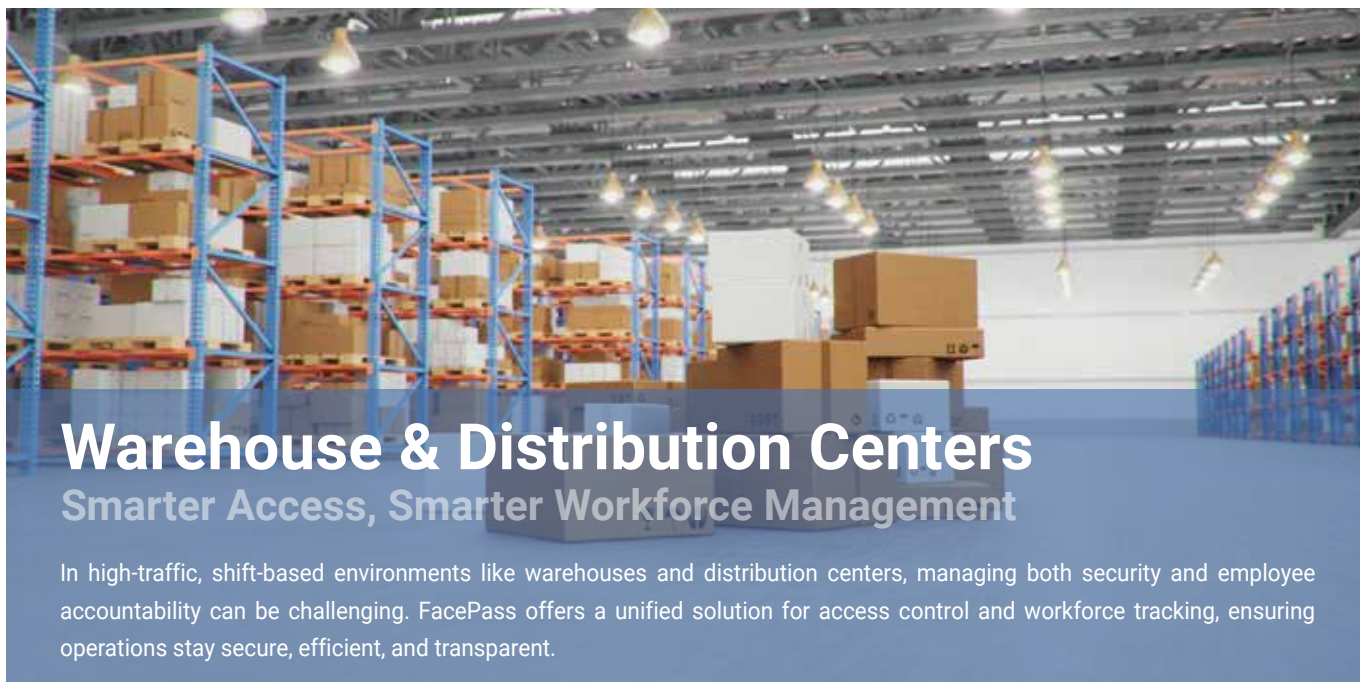

Clock-In / Clock-Out Integration

Employees and contractors can use facial recognition as both their access credential and time clock. Each entry or exit is automatically logged, providing accurate timekeeping without manual punches, badges, or PINs.

Why It Matters

Businesses gain a system that enhances security, simplifies administration, and reflects a forward-thinking, technology-driven workplace culture.

SOLUTIONS OVERVIEW

Warehouse & Distribution Centers Smarter Access, Smarter Workforce Management

In high-traffic, shift-based environments like warehouses and distribution centers, managing both security and employee accountability can be challenging. FacePass offers a unified solution for access control and workforce tracking, ensuring operations stay secure, efficient, and transparent.

Controlled Access for Employees and Contractors

Property managers can define who gets access to specific zones — whether it's loading docks, storage areas, or administrative offices. Credentials are tied to an individual's face, eliminating badge sharing or unauthorized entry.

Identity-Bound Logging

Every attempt is recorded and linked to a verified individual. This not only improves payroll accuracy but also enhances workplace safety and compliance tracking.

Frictionless Workforce Experience

Employees benefit from a simple, keyless, contactless way to access facilities and log their shifts — no more lost cards, forgotten PINs, or shared passes.

Clock-In / Clock-Out Integration

Employees and contractors can use facial recognition as both their access credential and time clock. Each entry or exit is automatically logged, providing accurate timekeeping without manual punches, badges, or PINs.

Scalable for Large Operations

Whether managing a single warehouse or a nationwide distribution network, FacePass provides centralized oversight. Access and time logs can be audited across hundreds of employees in real time.

Why It Matters

FacePass transforms warehouses into secure, efficient, and accountable workplaces. Businesses reduce operational risks, improve payroll accuracy, and strengthen safety protocols — all while giving employees and contractors a seamless experience.

Power	PoE+ Power Supply or External Power Supply
Mounting Options	Wall Mount, Desktop Mount, Access Lane
Door Locks Pairing	Magnet Lock, Electric Strike, Smart Lock
Screen Size Resolution	8-inch IPS Touch Screen 1280 x 800
Ingress Rating	IP65 (Outdoor Waterproof)

Frequently Asked Questions

Q1: Can someone unlock my door with a photo or video of me?

No. Ora FacePass uses 3D facial recognition and liveness detection, meaning it can distinguish between a live person and a photo, video, or mask. It's designed with financial-grade anti-spoofing technology.

Q2: Will your facial recognition work in low light or at night time?

Yes. Our device uses infrared structured light projection, allowing it to recognize your face in sub-seconds even in low-light environments.

Q3: I have darker skin. Will the facial recognition algorithm still work for me?

Absolutely. Our AI is trained on internationally diverse datasets to ensure high accuracy across all skin tones, nationalities and ethnicities, and it self-learns over time to improve performance.

Q4: Where is my facial data stored? Is it safe?

Your data is never stored in the cloud. It is encrypted and saved only on your device, and only you can access or delete it. Even our engineers can't see or use your data.

Q5: What if someone looks like me — like a sibling or twin?

According to Apple's benchmark, the odds of a false positive with facial recognition are 1 in 1,000,000. We've built Ora FacePass to match or exceed this industry standard.

Q6: What types of doors is this compatible with?

Ora FacePass works with deadbolts (single and double bore), mortise locks, access lanes, magnetic locks and electric strikes. It can also operate as a standalone system.

Q7: Can I still use a key or keypad if I want to?

Yes. Ora FacePass offers multi-modal access: use your face, fingerprint, passcode, or traditional key. You're always in control. We also offer emergency access via USB Type-C charging port in case the battery runs out.

Q8: Is there remote access or admin management?

Yes. Manage access from anywhere using our mobile app or web portal for commercial usage.

Grant, revoke, monitor and audit access in real-time — ideal for property managers, leasing offices, schools, or families.

Q9: How does this compare to competitors?

Ora FacePass offers more features at a better price than brands like Yale, Eufy, and more — and we integrate facial recognition directly into the smart lock, unlike others who require an external integration or don't offer this option at all.
